SUMMARY

Backend engineer who treats syntax as a detail and scalable systems as the craft. Learned by shipping real work through internships and gigs, not tutorials. DSA problem solver by practice, builder by habit. Turns messy problems into clean, shipped software. Language-agnostic fast learner, allergic to complexity.

WORK EXPERIENCE

Software Development Intern

May 2026 – Present

Vobiz.ai | Bengaluru, Karnataka, India

- Slashed S3 storage costs by 97.7% (lakhs/month to a few hundred rupees) by batching PCAP files into S3 archives, retrieved on demand via a 50M+ row path-index table, across 30+ EC2 instances.
- Designed a call recording retention and custom billing system handling 5M+ calls a day.
- Built core SMS/RCS messaging features in Go for the SIP trunking platform, supporting large-scale AI conversations between voice agents and chatbots.
- Developed a microservice monitoring carrier health, reporting to monitoring channels via a Slack bot.
- Diagnosed and fixed bugs across 30+ backend microservices while shipping daily improvements, improving stability and reliability.

Software Development Intern

September 2025 – December 2025

Devlume Software Solutions | Bengaluru, Karnataka, India

- Developed backend features across two projects in Python (Django, FastAPI) and Go (Gin), spanning API design and business logic.
- Built and integrated AWS cloud systems (IoT, console) to ingest and serve real-time industrial sensor data for a factory management platform (Wimera).
- Implemented Intercom integrations and VoIPmonitor packet capture/monitoring for a VoIP/SIP-based communications platform (Vobiz.ai).
- Fixed bugs and conducted code reviews, improving reliability and performance of backend services.

PowerBI Developer Intern

May 2024 – September 2024

In-Sync | Gurgaon, Haryana, India

- Built interactive Power BI dashboards (DAX, Power Query) for data modeling and business reporting for enterprise clients including Audi Kolkata, Ezeepay, RupeeBoss, and Ques Corp.

PERSONAL PROJECTS

LAN-Based ICPC Platform (Server | Client | Cloud)

May 2026 – September 2026

- Built from scratch in Go, a system spanning three applications that lets ICPC/CP contest organizers run contests securely without internet access, with monitoring and control.
- Engineered a cross-platform, Docker-sandboxed judge engine in Go with a concurrent worker pool to run C++, Python, and Java submissions, with ICPC-style scoring, ranking, and time/memory limits.
- Developed an admin dashboard for organizers to register teams, manage contests, and monitor participants through live scoreboards (WebSockets).
- Developed a cross-platform Electron participant app with kiosk mode, fullscreen enforcement, and anti-cheating mechanisms, along with monitoring tools for admins.
- Deployed a hosted portal on AWS EC2 (CI/CD via GitHub Actions) where teams download the contest app and organizers create contests with custom problem statements and test cases.

EDUCATION

Bachelor of Technology – Computer Science & Engineering

August 2024 – July 2028

Amity University, Lucknow | CGPA: 8.3

Indian Certificate of Secondary Education (ICSE)

City Montessori School, Lucknow | Score: 95.5%

TECHNICAL SKILLS

Languages: Go (Golang), Python, C++, SQL

Backend & APIs: REST APIs, Gin, Django, FastAPI, WebSockets, Microservices, Concurrency, SIP/VoIP

Cloud & DevOps: AWS (EC2, S3, IoT), Docker, Linux, GitHub Actions (CI/CD), Git

Data: SQLite, Power BI, DAX, Power Query

Fundamentals: Data Structures & Algorithms, LeetCode-style Problem Solving
